

THE REBORN CARD MAX - PCI-XP

Simple, effective, affordable

Bring your PC back to life **in seconds**

Just re-boot to restore original settings

Who benefits from the Reborn Card?

Education

School PC Labs

Libraries

Public access PC's

Commercial PC Labs

Business

Organisations with limited IT support

Branch and remote offices

Businesses looking to reduce the cost and inconvenience of system crashes

Home users

Home users looking to reduce cost and inconvenience of system crashes

VAR

Value Added Resellers looking to improve their offering

How would it effect your organisation if you could cut desktop support time in half?

As system administrators know, there are many ways the proper operation of a desktop computer can be effected. Problems with the operating system resulting in a system crash, improper software installations, incomplete Windows shutdown, a virus attack, users "inadvertently" deleting files or formatting the hard disk and the list goes on.

Result: support staff spending an inordinate amount of time re-imaging hard drives or fixing problems.

Not any more. With a Reborn Card installed on the PC all you do is re-boot the computer. That's it.

How it works

The intelligent back-up/recovery technology in the Reborn Card stores an image of your operating system and applications in dedicated partitions on the PC's hard drive. When the computer is re-booted, all original settings are invoked, and the computer is "reborn".

"Bonus" features

- **Network Copy** - Provided all your PC's and their set up are identical, the Reborn Card can also "broadcast" software updates to up to 200 PC's with Reborn Cards at once. This unique feature, SNCOPY, has the potential to revolutionise the way you maintain your PC network.
- **Remote Network control** - The management of computers with Reborn Cards installed is made very easy with the use of the MaxControl/User software. Create groups, wake-up pc's on the LAN, re-boot, restore and perform all the required functions from your system administrators PC.

Well established

Over 20 million copies of the Reborn Card have been sold in the USA, Europe, Asia and Australia. Thousands of schools, computer labs and over 1 million home users have used the card and the manufacturer, Lenten Technologies continues to break new ground in innovation.

Return on Investment

Compare the cost of desktop support and lost productivity to the relatively low cost, simple installation and low maintenance of the Reborn Card, and it becomes clear that this is a very sound investment.

THE REBORN CARD MAX - PCI-XP

Simple, effective, affordable

Bring your PC back to life **in seconds**

Just re-boot to restore original settings

Key features

- "Instant" recovery for Win 95/98/Me/NT/2000/XP
- "Back-up" recovery for other operating systems
- Backup Recovery every time you reboot or at selected times
- Network copy function
- Remote network control
- 1-7 IDE-HDD synchronised clone
- Multiple Boot partitions
- Auto restore CMOS data

What the Reborn Card offers...

Intelligent Backup/Recovery Technology

Radically increase the speed of backup and recovery. "Instant" Recovery works automatically, by simply re-booting the computer. Works on all Windows operating systems.

"Back-up" Recovery works for all other operating systems, but requires simple manual intervention, either at the desktop PC or using the remote control network function. (Max-Control)

Data files can also be recovered using separate partitions, however changes in data files since the last re-image would be lost.

Ease of installation

Installing the Reborn Card is very easy. Simply plug the Reborn PCI-MAX Card into one of your computer's PCI expansion slots, insert your installation diskette and follow the instructions that appear on your screen when you restart.

No hitches

Tried and tested, the Reborn Card will not affect the computer's compatibility, or stability regardless of the operating system you are using.

CMOS Automatic Recovery

Some poorly written software or even computer users can change computer CMOS settings resulting in abnormal operation of the PC. Reborn Card can protect you from this risk. If there are changes to CMOS at boot, it will automatically notify you and activate the appropriate recovery process.

Swapping hard drives

If you have two or more hard disks in removable drawers for quick swapping, you can **repeat the installation and backup procedure for each disk**, protecting all your hard disk drives with the Reborn Card.

Hard Disk Duplication

Reborn Card provides **an intelligent hard disk duplication** function. This allows you to perform from one to seven synchronized copies.

Want to know more?

Call us now to discuss your requirement, or write us an e-mail. Special arrangements are in place for Education customers and Not for Profit organisations.

SPECIFICATIONS

	Max
Version	PCI 32 bit
Expansion Slot	IDE / EIDE / ATA66,100,133 / SATA
Hard Drive Support	105mm X 40 mm (without bracket)
PCI Card Size	IBM PC compatible / 80386 and above color monitor
Computer Requirements	Yes (Award/ AMI/ Phoenix/ Intel/ and all the OEM BIOS)
Support all type BIOS	Yes
Plug and Play	Express / Custom / Network Installations
Installation Option	Support HDD size without limitation (bigger than 120GB)
Hard Drive Size	MS-DOS/ WIN 3.1/ 9X/ ME/ NT/ 2000/ XP
Instant Recovery for the OS	All known systems (except Solaris and Novell Server)
Backup Recovery for the OS	Yes (True 32 bits kernel technology. Support UDMA 66/100)
L-CACHE Technology Support	Yes (Smart detecting the free space with dynamic technology)
S-DATA Technology Support	Yes (Support 40 Partitions, system and data)
Multiple Boot Partition	Yes (Support 3 Data Partitions)
Specified Data Partition	Yes (Administration/ System Partition/ User / Backup /Restore)
Password Control	Yes (Auto/ Manual/ Smart)
CMOS Recovery	Yes (Switching from Backup Restore to Instant Restore Mode)
Switching Backup Mode Selection	Yes
Default Boot-up Selection	Yes
Lock Boot Partitions	Yes(1 ~ 99 sec)
Auto Startup Delay Selection	Support 1 to 7 Cloning Simultaneously
IDE HDD Clone	Yes (Every Rebooting/ Daily/ Weekly/ Monthly/ Specified Date)
Preset Auto-restore Boot Partition	Yes (By COMS/ Only Drive C/ A,C, CDROM)
Block Booting Media Option	Yes
Protection Against PCI Card Lost	Yes (Every Reboot/ Daily/ Weekly/ Monthly/ Specified Date)
Auto-clear Data Partition	Yes (Clone the entire HDD/ Partition/ Parameters)
Network Cloning	Yes
Title Menu Setting	No (<i>only available on Reborn Card WOL XP</i>)
★LAN Function	No (<i>only available on Reborn Card WOL XP</i>)
★Wake up on LAN	Yes
★Remote Control program	Yes
Broadcasting File Deployment	Yes
Monitoring	Yes
Keyboard/ Mouse Freezing	Yes
Remote Recovery Mode Switching	Yes
Remote Rebooting /Shutdown	Yes
Remote Multi-boot Selection	Yes
Un-manned Scheduling Task	Yes
Uninstall Card	Yes (OS will remain after uninstall when installed by Express)
